

# Overview Crediting Approaches

Approach	Targeted mitigation action	GHG quantification	Examples
<b>Project-based</b>	Large-scale emissions sources	Based on technological mitigation performance	Wind park
<b>Programmatic</b>	Large number of predefined activities		Green buildings
<b>Policy</b>	Policies that have the potential to reduce emissions	Economic modelling	Carbon pricing; energy efficiency standards
<b>Sectoral</b>	Reducing the net emissions in an economic sector	Inventory-based	Waste sector reform
<b>Jurisdictional</b>	Reducing the net emissions across a jurisdiction		REDD+, Integrated Landscapes
<b>Economy-wide</b>	Reducing the net emissions in small countries		Decarbonizing small island states or LDCs
