

CÔTE D'IVOIRE TAÏ NATIONAL EMISSIONS REDUCTION PROJECT – A JURIDICTIONNAL CREDITING APPROACH

By Eric KONAN (ERP Coordinator)
June 09, 2025, Sevilla (SPAIN)

PROGRAM DESCRIPTION AND INNOVATION

Participative forest
management

Direct payment of
beneficiaries by Mobile
Money

Key figures

4,6 km²

Jurisdictional program with 5
administrative region

- Classified forests
- Rural domain
- Parks and forest reserves

5,364 km²

of primary rainforest
and by far the largest remnant of
tropical rainforest in West Africa

Since

1982

UNESCO World Heritage Site

1,300

species of higher plants

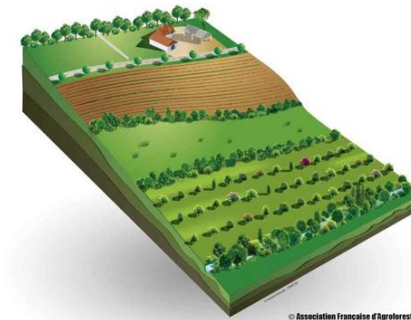

47

of the 54 species of large mammals
known from the tropical rainforests of
Upper Guinea.

CHALLENGES

- ❖ Multistakeholder coordination (Government, Private sector, Communities, NGO's) to reduce deforestation, protect forest and restore degraded forest ;
- ❖ Develop an inclusive and incentive benefit sharing plan ;
- ❖ Complex MRV setup to support benefit sharing ;
- ❖ Long term funding to support activities and to maintain achievements ;

Identification of beneficiaries and verification of the activities carried out by them

Direct payment of beneficiaries by Mobile Money

LESSONS LEARNED

❖ What work ?

- Jurisdictional scale created coherence and impact ;
- Early and sustained community engagement built trust ;
- Carbon finance ensured long-term viability.

❖ What can be improved ?

- Increase private sector engagement for scale and innovation ;
- Use the nesting approach to better take into account and better value the sequestration efforts of actors and get the most out of them
- Strengthen institutional and legal frameworks (in progress) ;

Thank you!
